Reddit: reddit.com/r/UltimateTipbot

Ultimate Tipbot was founded by [@kevin44](#) & [@kr33pt0](#) and operated with the help of a team of volunteers since the beginning.

What started as an idea for a Tipbot-Based Pseudonymous Cross-Platform Exchange with a focus on privacy, has grown into a platform with over 40 thousand users across several partner projects, along with our own groups. A user is any Telegram account with a balance in the Tipbot system.

Ultimate Tipbot has been well received by Telegram users and group owners alike. Many crypto groups and projects have expressed their interest in using it for their own groups or even requested completely custom work!

- **Ultimate Tipbot Beginnings**

Ultimate Tipbot Telegram group in combination with our Trading group are an important part of the project! They are a Tech-Demo of a new Tipbot system and a way to introduce new users to crypto!

It offers people from around the world an easy way to start using cryptocurrencies, with nothing more than a Telegram account (more platforms on the way!), while also teaching them about it. This is one of the ways we are doing our part on the road to mass-adoption!

Ultimate Tipbot has been sharing different cryptocurrencies with our members 24/7 for over 2.5 years by now! At peak it has been one of the most active groups on Telegram with over 350 unique daily visitors and 1,300 unique monthly visitors, forming a strong supporting community!

In addition to providing crypto-services to our members, we've also been supporting partner projects by listing their coins or tokens, providing them with custom branded Tipbots, setting up tasks, so our members can earn their crypto by supporting them and allowing partner advertisements in our groups!

We have weathered the crypto-winter working as volunteers and are now expanding further! With the launch of our token, Ultimate Tipbot can become a full-time job, allowing us to expand and reach our goals much faster!

- **Tipbots**

Tipbots are custodial wallets, which offer a way of transferring cryptocurrencies between users (`/tip`), without having to pay any fees, in any amount as long as you have the balance. This includes amounts which would normally be prohibitively expensive to send through the blockchain, (*for example a single Satoshi*). They also allow sharing crypto with all active members in a group (`/rain`) or 3 randomly selected users (`/lucky`) as well as all the usual wallet functionality of sending (`/withdraw`) and receiving (`/deposit`) crypto through the blockchain. Rains and tips can also be scheduled to automatically provide important information on repeat while tagging any group members present. Members can opt-out from receiving these tags using the `/mentions` command.

Additionally, Tipbots can also offer features such as lottery, dice games and more, including completely custom functionality on request!

- **Member Ranking System**

Since sharing free crypto in groups is prone to abuse (*for example by users with multiple accounts*) we have also implemented a Ranking System. It rewards members, who actually read important group messages and contribute to the conversation, much more than those, who just post one or two word messages, only to receive rains. This way we encourage quality engagement, while those who would abuse the system only get minimal shares of the rains! Once the Ranking System is fully automated it will be available to all groups using our Tipbot system as well!

Additionally, we are constantly upgrading our **Moderator Bot** to detect and stop such abuse. While there are some nearly fool-proof methods which could eliminate this problem almost entirely, they would require collecting information on our members, which goes against our goals and principles.

- **Utility Bots**

Our utility bots help with moderation by allowing users to report spam and keeping automatic logs of reported messages (ModBot), help with trading (ExchangeBot), price checks & conversions (PriceBot) and soon a lot more! Example: Custom AI Help Bots, AI Mod Bots and more (*details below*)!

- **Crypto Adoption**

Our platform helps members learn about crypto by using it, while receiving any support they might need from our team. They can learn even more by reading through our educational messages regarding crypto security. In the past, members have also participated in crypto-themed quizzes in return for rewards, in order to learn even more.

Most importantly we have offered everyone a low entry barrier into the exciting world of cryptocurrencies, by only requiring a Telegram account to hold and use their balances. We have also encouraged members to introduce more people to crypto by using a Referral System.

- **Ecommerce Platform**

We have built our very own Ecommerce Platform from the group up. Users can create their own custom branded store and offer products or services in return for crypto or other payment methods such as PayPal! Developers can create a store for their project, exclusive to their cryptocurrency.

- **UltimatePay**

Accept payments in crypto and fiat whether you are a business or an individual!

- **Crypto Services for Developers**

In recent years, multiple other crypto projects have requested listing of their coins/tokens on our platform and in return received custom branded Tipbots for use in their groups, allowing them to share their cryptocurrencies with their own users, increasing engagement and rewarding members for their support. Partner projects also share their crypto with Ultimate Tipbot users which is how our members learn about interesting new projects, collect some of their coins and profit from their growth!

Partnered projects regularly set up tasks in our Task Bot System, where our combined members can earn their coins in return for supporting their projects. Additionally, partners can freely advertise in the Tipbot group: t.me/UlimateTipbot

With the release of the new All-In-One Tipbot, unobtrusive advertisements from our partners can now appear in any group using the Tipbot for free. Group owners who don't want advertisements can disable them by owning our tokens.

Among future services, partner projects will soon also be able to request custom AI Help-bots which don't require sleep and can answer questions as well as a good admin!

AI Moderation Bots can also help keep groups clean of spam and safer for users!

- **Ultimate Exchange**

Our members can trade their balances in our Trading group using our **Exchange Bot*** service instead of tipping each other and having to worry about who sends first and risking the other person not tipping back.

Using the **/trade** or **/sell** commands members can lock in their offer and another member can accept it or make a counter-offer of their own.

Members can withdraw their balances to their own external wallets or 3rd party exchanges – as long as they have enough for a minimum withdrawal.

(Withdrawal minimums are necessary in order to prevent members from accidentally spending too much of their withdrawal amount on blockchain fees or even wasting it entirely)

** Exchange Bot functions are being expanded to allow setting max-slippage and other helpful features which will simplify trading and increase the proportion of successful trades.*

For now the Exchange is just a P2P trading group with the ExchangeBot facilitating the trades and acting as Escrow. Later it will also become available through Discord, our website and ultimately even directly tied to our DEX (**UltimateSwap**)!

• Supported Cryptocurrencies

Currently the platform supports 13 coins and 2 ERC-20 tokens and already allows quick and easy listing of more tokens!

All of this was built and maintained without any external investors thanks to our team of volunteers. We did everything in our power to keep our members and partners happy with our services and become a known and trusted name in the crypto space.

Coins: \$BTC | \$ETH | \$BCH | \$BNB (BSC) | \$LTC | \$DOGE | \$GHOST | \$ENQ | \$XEP | \$XDN | \$RPD | \$RDD | \$PI

Tokens: (ERC-20) \$SHIB | \$WOLF

For an up-to-date list: t.me/UltimeHelp/9869/9876

Listing of new tokens can now be requested and paid directly from the [Ethereum Tipbot](#) using the [/AddToken](#) command. The same command is being added for BSC tokens via the [Binance Smart Chain Tipbot](#).

- **All-In-One Tipbot**

In order to reduce the complexity of our system and simplify its use, we recently released an All-In-One Tipbot found at t.me/UltimateTokenBot which supports all the listed cryptocurrencies and is now available and free to use for any Telegram group. If a user has a balance in our system it will also be available in any group they may be in with our All-In-One Tipbot present. The [Help Bot](#) is required to keep a list of active users and can also provide other helpful functions such as filters, buy notifications and more!

Until now, our Tipbots were only available to partner projects who listed their own coins on our platform. With the new All-In-One Tipbot being available to all Telegram groups for free, our user base as well as advertising surface both for Ultimate Tipbot and our partners will drastically increase!

Before the All-In-One Tipbot, each of the coins listed above was supported by a branded bot specifically made for that coin, in some cases on request of our partners. Branded bots will continue to be available to current and future partners, while other crypto groups can use the All-In-One Tipbot.

• Other Ultimate Bots

HelpBot – Keeps track of active users for rains, taking Rankings into account. Also answers to /MyBal command and various filter words. Works in private. Will also provide Buy Notifications, Charts and more! With future **AI integration**, the possibilities will become endless!

PriceBot – Allows price checks and conversions between different currencies. Works in groups and in private.

ExchangeBot – Allows users to trade safely. Only works in groups for now.

ModBot – Allows users to report SPAM in groups and alerts all admins for quick reaction, while also keeping automatic logs of all admin actions taken. Members can reply to spam with @admin or @report (and other) tags which sends every admin the reported message in private, making it possible to remove any inappropriate messages very quickly! Only works in groups for regular members.

ReferralBot – Allows members to be rewarded for introducing new people to crypto.

On top of the publicly available bots, we also have a Control Center, enabling us to securely monitor our systems and ensure they are running smoothly, directly from Telegram.

- **Ultimate Tipbot Token (Ticker: \$ULTIMATEBOT)**

Contract: [0x6b4CEB0beb0DCFO043C9389e01e3F1c84b422e4f](#)

Available on: [DEXTools](#) | [DEXView](#) | [UniSwap](#)

Website: [UltimateTipbot.com](#)

Ultimate Tipbot Token is the heart of the Ultimate Tipbot platform – an interconnected network of Telegram bots (Tipbots | Utility Bots | Mod Bot | Task Bot | DEX Bot & soon more!)

Total Supply: 10M | 1.15M Initial Reserve | **>44k Burned**

Tax: 5/5 | [Liquidity Locked!](#) | [Contract Renounced!](#)

Max wallet: 2% (200,000 \$ULTIMATEBOT)

Initial LP: 1.6 ETH

Automatic Supply Reduction through reflections on the Burn-Address!

Reflections for holders from part of the token tax! Just hold your tokens and watch your balance grow!

Increased Revenue Sharing both for investors and regular members alike!

Low or zero system fees in UltimateTipbot for Token holders! For example, you only pay blockchain fee when withdrawing, reduced fee when using the ExchangeBot

Buybacks & Burns for price support!

- **Utility**

For future partners, our services, such as coin/token listing, branded Tipbots, advertising and anything else we offer currently or in the future, such as custom AI Help and Mod-Bots, will be available at discounted rates, when paid in our token, or in many cases even free for larger holders!

This includes everything offered via our Ecommerce Platform, such as listing your products or services or creating your own store, accepting fiat or any supported crypto.

The brand new All-In-One Tipbot which is free to use in any Telegram group will show unobtrusive ads to free users*. These ads can be bought with our own token as well, if the developer wants a discount, or again free for larger holders!

** Group owners who do not want ads when using our Tipbot can disable them by paying a small fee or holding a certain amount of our tokens.*

- **Reflections**

All investors can look forward to receiving reflections on their token balance from the token part of the tax! Your balance simply increases without incoming transactions, proportionally to the amount of tokens you hold! A wallet holding 1% of tokens will get 1% of the tokens taken as tax.

- **Token Burns**

Burn Address:

- **Increased Revenue Sharing**

- **Buybacks**

Team will support token price with buybacks as needed. Tokens bought with funds from the Marketing wallet will get burned!

- **The Future**

Besides expanding the services already mentioned, our system will spread to other platforms and certain functions like trading will also become possible directly through our Website. The entire system will ultimately become connected to our upcoming DEX allowing direct trades between the two platforms!

Other future plans involve connecting the two parts of the project, for off-chain trading, where this would be beneficial for saving on fees/taxes as well as adding the ability to trade tokens for coins directly between the Tipbot-Exchange and our future DEX!

Additionally, since one of our goals is to make crypto available to everyone, we want to make otherwise expensive ERC-20 token investments available for smaller investors as well! More on this will be revealed in an upcoming WhitePaper.

While we have many plans in the making, they will be rolled out gradually and elaborated on fully in future Whitepaper releases in order to reduce the chances of our ideas being copied – something which has happened in the past more than once already...

- **Up Next**

CoinMarketCap and CoinGecko listing

Showcasing utility of our existing and upcoming bots and related systems.

\$ULTIMATEBOT Tipbot making buys and trading available within our own system!

Website updates – custom \$ULTIMATEBOT token page with a dApp to deposit into the UltimateTipbot system, updated roadmap.

Wrapped token with bridge available through our website, to simplify CEX listings.

DEX-Bot with features useful for investors as well as some special functions which will be rolled out with the next whitepaper release.

Blockchain at your fingertips One of the main reasons bots are popular at the moment is that with nothing more than a phone in your hand, you can get access to abilities previously only possible to advanced users / developers or even not available at all.

- **UltimateSwap DEX (WIP)**

Website: UltimateSwap.com *(Functionality Currently Disabled)*

Marketing fees and other revenue sources may be used in part to further expand our project and services and eventually allow us to work on it full time, leading to Stage 2 – UltimateSwap launch (Token & DEX)!

At that point in time the UltimateSwap launch will be the second opportunity for investors to make profits but will require a much larger investment on behalf of the team, which is another reason the first token is important.

Our token is not a meme pump-and-dump, it's a utility token with multiple uses in our already expansive and constantly growing system consisting of multiple interconnected bots.

We have been around for years by now and we plan to stick around for many more to come!
